NetElixir™

EXCLUSIVE:

CHATGPT HACKS FOR SEO

The quality of your outputs on ChatGPT depend on the quality of your inputs. Try to be as specific as possible and use ChatGPT's answers to continually refine your subsequent inputs.
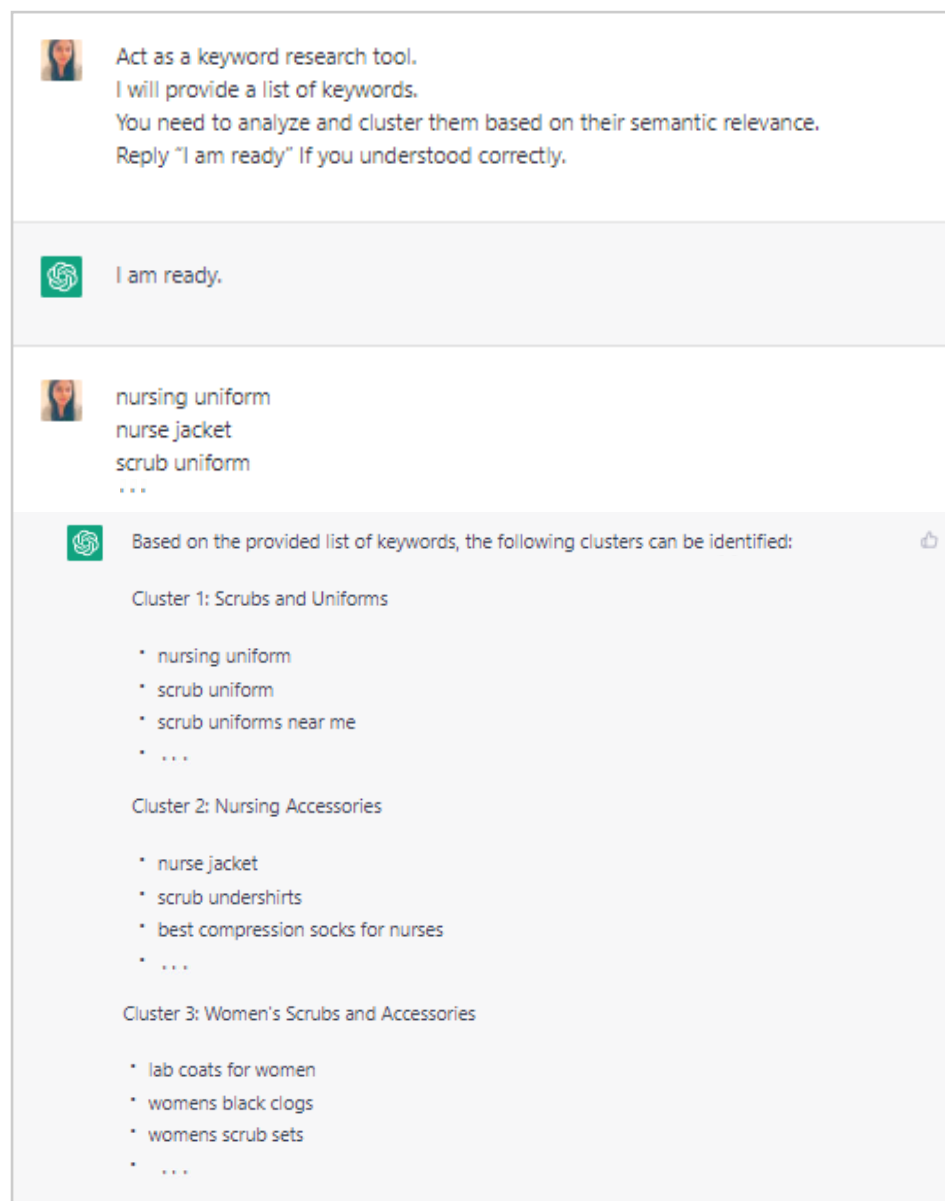

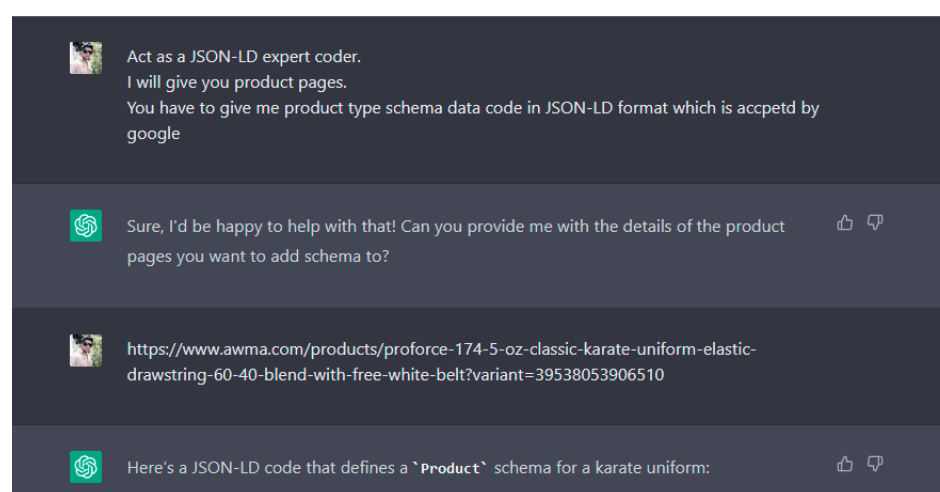

Our hacks are generated based on at least the third input into ChatGPT.

Structured Data Generation

Simplify the process of creating structured data for your website. With the correct prompts and URL, the tool can produce a functioning structured schema according to standard JSON-ID format and best practices.

What this hack does:
- Saves time compared to manually generating data or when large quantities of data are needed
- Easily organizes and updates your data to help search engines better crawl your website

Keyword Clustering

Easily generate clusters to optimize your keyword strategy for SEO, content, and paid media optimization.

What this hack does:
- Quickly analyzes large amounts of text to find related words and phrases
- Identifies new opportunities for targeting and content opportunities to help your brand own more keyword variations

30 Seconds Video Script Prompts

Video is an increasingly vital component of any marketing strategy. However, sourcing topics and writing scripts is time consuming.

What this hack does:
- Creates high-quality, targeted content in response to specific paraments like target audience, tone, and messaging key points
- Streamlines content creation process for YouTube Shorts, TikTok, and other quick videos by writing the first draft of script
